```
//Author : Sarah F5P1
/*PickNGo Store has conducted a customer survey to improve its
business operations. Gathering customer feedback eliminates
guesswork and provides the company with clear insights into what
customers truly want. The goal is to analyze the feedback
ratings, which range from 1 (poor) to 10 (excellent). The program
will:
```

(a) Prompt the user to enter the feedback rating for 13 customers into an array.

(b) Determine and display all feedback ratings that are 6.5 or below and their respective customer index(es)

The Java program should declare necessary meaningful variables.*/

```
import java.util.Scanner ;
class F5P1_Sarah {
    public static void main (String[]args) {
        Scanner sc = new Scanner (System.in) ;
        //declare variable array named feedbackRating for 13
customers
        double[ ] feedbackRating = new double [13] ;
        // First loop : read 13 ratings into the array
        int i = 0 ;
        while (i<13) {
            System.out.print("Enter feedback rating " + (i+1) + "
